G7 ICT Midterm Project: Retro Tech

1. Project Overview

Welcome to the analog era of the 80s and 90s! For your midterm project, you are tasked with recreating a **classic piece of retro technology**. You will move beyond simple wineglasses and barrels to explore "component-based modeling"—building an object by combining different shapes and details.

Deadline: April 3rd

2. Technical Requirements

Your model must demonstrate the skills we've covered in class, plus one new exploration:

- **Transformation Basics**: Proper use of G (Grab/Move), R (Rotate), and S (Scale).
- **Mesh Editing**: At least one instance of E (Extrude) and I (Inset Face).
- **Edge Refinement**: Use Ctrl + B (Bevel) to soften sharp edges (real objects are rarely 100% sharp!).
- **Visual design**: Apply at least **3 distinct materials/colors**

3. Inspiration List

If you're stuck, consider one of these classic designs:

1. **Nintendo GameBoy**: Great for practicing button indentations and directional pads.
2. **Sony Walkman**: Focus on the transparent cassette window and side playback buttons.
3. **1984 Macintosh Computer**: Practice the "inset" screen and the iconic floppy disk slot.
4. **Retro Radio**: Use the "Barrel" logic to create rotating tuning knobs and speaker grills.

4. Submission Checklist

Please submit the following by the deadline:

- ☐ **Project File**: Your original .blend file.

- ☐ **Short Note**: One sentence explaining why you chose this object and which part was the most challenging to build.

5. Grading Rubric

Criteria	Weight	Expectation
Integrity	40%	Submit your own work. No plagiarism is accepted.
Detailing	25%	Inclusion of key features like buttons, ports, or screens.
Aesthetics	10%	Clean material application and logical proportions.
Innovation	10%	Use of a new tool or a unique creative "twist" on the design.
Submission	10%	2% off for each day of late submission. Your work will not accepted 5 days after the deadline.
Short Note	5%	Explain your project and your building process.

Example Work:
